Art Unit: 3752

## **DETAILED ACTION**

## Information Disclosure Statement

1. Applicant's prior art citation filed April 12, 29 of 2002 and March 21, 2003 have been received, considered and placed of record.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mercil (U.S. Patent No. 4,427,154) in view of Richard (U.S. Patent No. 4,642,830).

Mercil teaches a spray boom for agricultural spraying purpose comprising identical main frames (180, 200) (see Fig. 2). Mercil failed to teach a boom having two flat ladders of which are consisting of an upper beam connected to a lower beam by girders to form a three dimensional structure. Richard teaches a beam structure having two flat ladders and each ladder consists of an upper beam connected to a lower beam by girders (see Fig. 1). The apparatus includes lower cross beams and a mean for assembling the two ladders and the lower cross beams to form a three dimensional structure (see Fig. 1). The three dimensional structure comprises a triangular cross section; the upper beams of the ladders are side to side; the lower beams are held apart by the lower cross beams (see Fig. 1). It would have been obvious to one having

Application/Control Number: 10/051,041

Art Unit: 3752

ordinary skills in the art at the time the invention was made to have a boom having two

Page 3

flat ladders of which are consisting of an upper beam connected to a lower beam by

girders to form a three dimensional structure to provide a strong support or the boom.

Both Mercil and Richard do not mentioned explicitly at least one of the girders and the

lower beam and/or upper beam make an angle of 90 degrees and the three dimensional

structure are convergent. It would have been obvious to one skilled artisan in the art to

have at least one of the girders and the lower beam and/or upper beam make an angle

of 90 degrees and the three dimensional structure are convergent to provide a strong

and/or better support for the boom. Methods follow by an apparatus.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Thach H Bui whose telephone number is 703-305-0063.

The examiner can normally be reached on Monday-Friday, 7:30-4 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Michael Mar can be reached on 703-308-2087. The fax phone number for

the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-308-

1148.

T.B. 10/15/03.
